
Table of Contents

Executive Summary	i
1.0 About the study	5
1.1 Study objectives	5
1.2 Context and background of green roof related activity in Toronto.....	6
1.2.1 Green Roof Demonstration Project.....	6
1.2.2 Sustainable Technologies Consortium – York University Roof Monitoring Program.....	7
1.2.3 City of Toronto, FCM and OCE-ETech partnership.....	8
1.3 Other FCM sponsored studies of GRT	9
1.3.1 City of Winnipeg study.....	9
1.3.2 City of Waterloo study.....	9
2.0 Survey of research related to green roofs	11
2.1 Potential green roof benefits	11
2.2 Energy budgets of individual buildings	12
2.3 Urban heat island	16
2.4 Stormwater management implications.....	18
2.4.1 Combined sewer systems.....	19
2.4.2 Sanitary sewers	19
2.4.3 Wastewater treatment systems	20
2.4.4 Storm sewer systems.....	20
2.4.5 Control measures for sanitary sewer systems	20
2.4.5 Control measures for stormwater.....	21
2.5 Air quality impacts.....	27
2.6 Green amenity space	28
2.7 Habitat preservation	28
2.8 Property values.....	31
2.9 Derivation of economic benefit from green roofs.....	31
2.9.1 Methodology	31
2.9.2 Time period.....	32
2.9.3 Discount rate	32
2.9.4 Installation and maintenance costs.....	32
2.9.5 Economies of scale	33
2.9.6 Administration costs	33
2.9.7 Energy cost savings.....	33
2.9.8 Urban heat island	34
2.9.9 Stormwater flow reduction	34
2.9.10 Air pollution and greenhouse gas effects.....	34

2.9.11	Food production	35
2.9.12	Aesthetic benefits	35
2.9.13	Job creation	35
2.9.14	Cost-benefit ratios and life-cycle cost assessments	35
2.10	Summary of green roof research on costs and benefits	36
3.0	Survey of types of green roofs and their standards	38
3.1	Green roofs described	38
3.2	Currently available green roof technology	38
3.2.1	Complete systems	39
3.2.2	Modular systems	40
3.2.3	Precultivated vegetation blankets	42
3.3	Survey of green roof system standards and performance requirements	43
3.3.1	FLL guidelines	43
3.3.2	Green roof requirements	47
4.0	Green roof benefits and costs for the City of Toronto	50
4.1	Description of approach	50
4.1.1	Identification of benefits	50
4.1.2	Quantification of impacts	50
4.1.3	Monetary valuation of benefits	50
4.1.4	City of Toronto specific determination of benefits – use of building inventory data	51
4.2	Methodology and results	52
4.2.1	Use of geographic information system (GIS)	52
4.2.2	Costs of GRT	53
4.2.3	Stormwater	54
4.2.4	Combined sewers	55
4.2.5	Air quality	58
4.2.6	Building energy and the urban heat island	59
5.	Summary and recommendations	63
5.1	Other benefits	64
5.2	Green roofs on sloped surfaces	64
5.3	Recommendation for types of green roofs	64
5.4	Next steps	66

Appendices

- Appendix A - References
- Appendix B - List of GIS data and sources
- Appendix C - Data for stormwater calculations
- Appendix D - GIS maps

List of Tables and Figures

Figure 2.1 Methodology to analyze the impact of cool roofs and cool pavements on energy use. [After: Akbari et al. (2001)]	13
Table 2.1 – Summary of key findings from literature review related to heat transfer, energy use and green roofs	14
Table 2.1 – Summary of key findings from literature review related to heat transfer, energy use and green roofs (continued)	15
Figure 2.2 Generalized cross-section of a typical urban heat island [After Oke (1987)]	16
Table 2.2 April 2003 hydrologic retention for the WCC green roof in Goldsboro, NC [after Jennings et al. (2003)]	22
Figure 2.3 Relationship between the peak flow and runoff on green roof [after Jennings et al. (2003)]	23
Table 2.3 Green roof runoff volume reduction for 2003 and 2004 monitoring seasons (TRCA 2005)	25
Table 2.4 Peak flow reductions for a range of event sizes (TRCA 2005)	25
Table 2.5 Comparison of concentrations for selected parameters from the control roof and the garden (TRCA 2005)	25
Table 2.6 – Summary of key findings from a literature review related to stormwater and green roofs	26
Table 2.7 – Summary of key findings from literature review related to air quality and green roofs	30
Figure 3.1 A typical Sopranature green roof assembly on conventional roof (Adapted from Soprema Inc.)	40
Figure 3.2 Photograph showing Green Roof Block System (Adapted from St. Louis Metalworks Company)	41
Figure 3.3 Photograph showing GreenGrid System (Adapted from Western Solutions Inc.) 41	
Figure 3.4 Photograph showing ELT system (Adapted from Elevated Landscape Technologies)	42
Figure 3.5 Photograph showing Xero Flor System installation and cross section (Adapted from Xero Flor Canada)	43
Table 3.1 Growing medium depth required for various types of vegetation on different types of green roofs and Annual average water retention as percentage of rainfall for selected types of green roofs	46
Table 3.2 Green roof requirements in selected European jurisdictions	49
Table 4.1 Available areas for green roof implementation	53
Table 4.2 Input and calibrated data for the SUDS model	57
Table 4.3 Analysis of CSO scenarios using the SUDS model	57
Table 4.4 Impact on air quality from grass roofs Reductions in contaminants and monetary impact as shown	59
Table 4.5 Direct Energy savings from green roof implementation	60
Table 4.6 Indirect energy savings from green roof implementation (Impact of reduction in urban heat island effect in Toronto)	62

[Table 5.1 Summary of municipal level environmental benefits of green roof implementation in the City of Toronto \(Assuming green roof coverage of approximately 5,000 hectares\)](#) 63

[Table C1 Unit response functions for runoff calculations](#) C1

[Table C2 Comparison of unit costs of best management practices and estimation of cost saving of green roofs](#) C2
